Irving, TX: Shermco Industries Machine Services Division has achieved the update of their Quality Management System Program to the latest standard of ISO 9001:2015. Shermco was one of the first motor and generator remanufacturers to establish this level of quality assurance to support their ongoing industrial and wind energy services. Shermco was certified to this standard by DNV GL – Business Assurance, one of the world’s largest engineering and certification agencies. “Along with ISO 9001, our participation in the SKF and Schaeffler Certified Rebuilder Programs as well as certification by the Electrical Apparatus Service Association also supports our commitment to continuous quality improvement,” said Phillip Kalsch, Director of MSD Quality.

This ISO standard is based on customer focus, management engagement, process management documentation and ongoing improvement initiatives. Shermco Industries has implemented many innovative continuous improvement programs over the past five years including the Shermco FIT (Focus, Innovate and Transform) Kaizen events and the 6Si continuous improvement program which also supports their OSHA VPP Star Site ongoing safety initiative certification.

“Our ongoing quest to achieve the highest levels of safety, quality and customer service is reflected in this important achievement. Our commitment to the ISO 9001 standard since 2008 has greatly improved not just the quality of our products, but also the safety and productivity of our manufacturing facilities. Congratulations to our quality and manufacturing teams and all of our technicians on achieving this international recognition for their efforts,” said Paul Idziak, vice-president of Shermco’s Machine Services Division
